**PRODUCT LABELLING:** We have always adopted what we consider to be an honest position. We have rated our fuels according to "peak-heat burn-time" and not to the time a flame can be kept alight in the burner. HACCP regulations require hot food to be kept at temperatures in excess of 63°C whilst available for serving. All HOT STUFF fuels will raise the water bath temperature above 70°C in minimum time and hold it there for their rated times. Hence, instead of "3-Hrs", we state **2-Hours**, similarly, **4-Hours** and **6-Hours** whilst we could claim "4-5 hours" and "6-8 hours" if we wanted to. We are sure you like us the way we are. Ps. Fuel prices held until end of 2008. E & O E
